

Scaling summary (implicit graphs; 1 MPI rank/node unless noted)

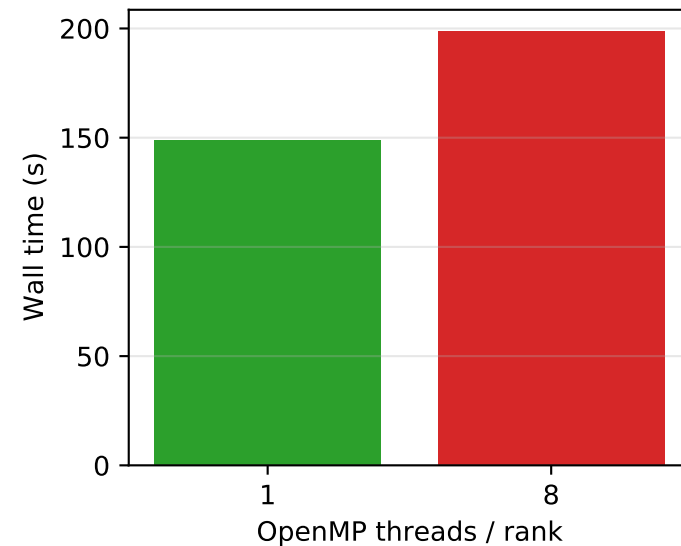

(1) Strong scaling: geom medium 10^9 , $w = 1$

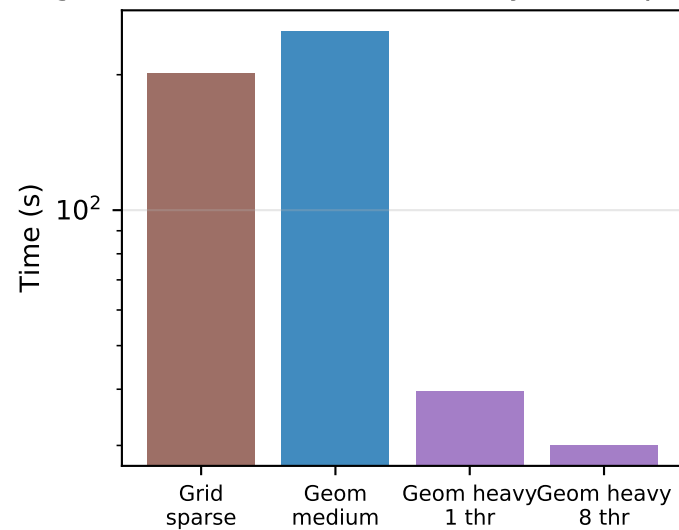

(2) Same graph, w overlay (1 thr/rank)

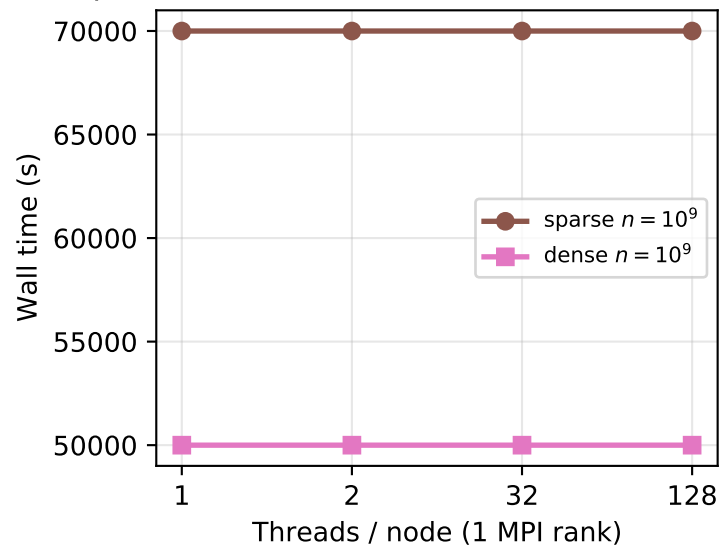

(3) Threads @ 2 nodes, geom medium $w = 1$

(4) Neighbor cost (1n, 1 rank; heavy = 10^8 parallel sp)

(5) Sparse vs dense grid, $w = 5$, 1 node

(6) Load balance: baseline vs steal (2n, 1 thr, geom medium $w = 1$)
